

NOTICE TO RESIDENTS
Cleaning and Televising of the Sanitary Sewer System

Coloma Charter Township has obtained a Grant from the State of Michigan to investigate sections of the sanitary sewer system. The Township has contracted with **Corby Energy Services (CES)** to perform the work associated with this project by means of Cleaning and Televising the sanitary Sewers within the Township.

The first step of the project is cleaning of the sanitary sewer. You will notice larger vehicles within the road ways. These vehicles are used in the cleaning and televising operations of this project. You may hear or see back pressure of air in your toilets and/or drains, this is not unusual. This is the result of material in the main sewer passing by your buildings service, which is connected to the Township sewer. In order to minimize the possibility of discharge from your toilets during the use of this hydraulically propelled equipment; **please close your toilet covers.**

Also, to prevent sewer odor from coming into your home, we suggest pouring a cup or two of water into each basement floor drain. Because water evaporates over time, this should be done regularly as a preventative measure.

Corby Energy Services (CES) appreciates your help to make this project successful for Coloma Charter Township and its residents. Receipt of this notice serves as notice that work will be progressing in your area during the 2 week period listed on this notice

04/26/18 thru 5/11/18

Below is a list of contacts if you should have any questions.

Thank you,

Jacob Martin
